

Testing Services

On-site testing services are available from ADWEL for the following:

- PD Testing using the PDA Premium instrument or the Corona Probe - PPM-97.
 - Stator insulation testing using the Digital EL CID, RIV, Motor Core tester - MCT 2 or the DC Ramp Tester.
 - Wedge Tightness testing using the Wedge Tightness Detector - WTD-501
- Every test includes a written report on the test data collected

Field Services

ADWEL offers on-site engineering for installation of permanent PD monitoring equipment, such as PDA couplers and associated apparatus. Services include supervision of installation, inspection, commissioning and testing of PD system. Included with this service is a written installation report as well as a separate analysis and interpretation report of the collected test data

Training

Adwel International Ltd. offers on-site training in the use and operation of all their test instruments. The training course generally consists of a 2-day session - one day in a classroom setting for teaching of theory, fundamentals and procedures; one day for practical use of the instrument (access to machine is required).

Repair & Calibration of Test Instruments

A repair and calibration service is available for all test equipment manufactured by ADWEL.

We recommend that the following shipping procedure be followed when returning instruments for either repair and/or calibration : For shipping procedures to our Canada office, [click here](#) and for shipping procedures to our UK office, [click here](#)
